Abstract

It is fact and true that economical and social status and condition of the people in global contexts would not be same but it would be varied according their social and economical status from their ancestor's periods onwards. Status are classified into several and plethora categories such as income, job, property status, education status, cultural developments, political status and other bank saving status. Based on these categories people's status have been varied since beginning of the world system, in which every one of us want to get status in those fields by competing with others both directly and indirectly. Due to this competition regular conflicts and sporadic conflicts are arising between people to people and community to community with an intention to increase their profile before others and equal to others in the society. From these aspects this study is designed to analysis social and economical factors and status of the health care women in cuddalore district, in this way this study is aimed at exploring of their nature of job, income and other factors relating to their occupation which propels their social and economic status would be analysed. Definitely, people would be varied on account of known factors of the above said factors though they work lot will not able to progress in their life due to weak basic property status and parents situations.

Introduction

Cuddalore district is one of the famous districts in terms of knowing jack fruits, cultivating of sugarcane crops, cotton, sea food, fishing, faddy cultivation and cashew nuts producing. From this backdrop it has been one of the fertile and famous districts in the Tamilnadu topography. People in this region have been doing deeply and regularly

farmers works their working nature would be seen in agricultural lands toward nurturing and harvesting agricultural product. Before Annamalai university establishment there were no education developments and improvements after establishment there have been abundant and plenty of educated people from street to street in every villages because from agricultural incomes every one of them

have been shown great interest toward educating their children's and relatives , most of them have been with higher education qualification ,many of them are employed on both private and public concern on different postings and jobs across the Tamilnadu. Annamalai university was not established for its benefit but was established for create egalitarian and equitable society in which every one of family members and whole family members have to get education in medical, arts and others social science areas if so which would be more helpful to make strong and steady India. Its education developments in cuddalore district makes cuddalore more prosperous and developments as international students and people wants to get education in that because its famous and popularity in giving education to each family has been spread to internal society thereby people and students from there is showing ceaseless concern on this university for studying purposes.

Though its founder has been passed away, his vision and contribution would not be forgotten and vanished from the lips of every one of who got free education from the university. Its glory ,contribution and hard work has been living on every educated poor boy's life and career ,every time founder of Annamalai university would be praised and resuscitated when educated boys form his university start to think about his contribution. To be such level its contribution has been one of epoch making and every remembering story even at present time though funder has been passed away. Among these several and numerous famous and property cuddalore has been functioning effectively and efficiently with an interest to protect and produce more

education, developments and success with government aid and supports.

Social and economic status of women's working in health care services in Cuddalore district Women from beginning of the civil society have been initiator, developer, coordinator and programmer of the entire family and civil society's developments. They do lot of work and several jobs in which they are being honoured and respected by the employers and management authority. From their responsible and sincere working nature unprovided and unavailing an opportunity is given to them across the Tamilnadu, than male people they have been so famous in pursuing of work more meticulously thereby they do get more career and other opportunities than male people. Women are compassion, sympathy, mercy, clemency, passion, sincerity, ethics, genuity, morality and accountability thereby they are respected and treated in well polite and humble ways by the all authority and family.

Their innate and natural characters of responsible, dutiful, accountability, reliability, trustworthy, meticulous thinking and fair family running have been brought numerous success and credits for their name of women than male. In present context women are guarding, protecting and nurturing all family's responsibility and commitments than male people because male people are maligned due to consuming of arracks, liquor and other tobacco items, all responsibility and commitments which must be done by the male people are shouldered and beard by the women in more family of more villages of the Tamilnadu, to continue this work they are studying lot of courses like diploma in hospital management, nursing,

stenographer, typewriting, tailoring ,pharmacy and druggist jobs for their survival and career purposes. After study has been completed they are hired on proper client and company thereby they earn to do all job left out by male people in each family.

Working women in both private and public health care fields in Cuddalore districts

Cuddalore has been famous in agrarian and agricultural horticultural fields except other fields, hospital and health care wise there are very few hospitals in quality and quantity wise because geography setting of that district is structured and made by agricultural activities, relating to this if people get any injury and meet accidents they would be admitted in local hospitals and other low range private hospitals. At the centre there is Raja Muthaiya Hospital was founded by founder of Annamalai university chettiyar with vision to serve rural area's people health development still its job and duty has been continuing with vision to protect those people who are living in rural settings. In this hospital many doctors, nurses, pharmacist, sweeper, attendee and other ward boys are working since its establishments, their life, education, social and economical status and situations are minimum at enough and satisfactory conditions. Comparing to Chennai, other districts cuddalore has minimum and less private and public quality hospitals and health care institutions because most of injured cases ,suicide cases and other firing cases are taken to the Puducherry hospitals form several kilometres of the several cuddalore villages ,before taking to Puducherry Hospitals they shall be admitted in Chidambaram Raja Muthaiya hospitals if once doctor said there particular patient

could not be treated they shall be taken to the Puducherry hospitals. This situation and condition remains still since Puducherry has been very close and adjacent to Cuddalore district. Many of them had been working at temporary basis at less salary in Chidambaram once government has been undertaken that hospitals they are paid maximum salary thereby they are able to accomplish family commitments, involve at carry out social responsibilities, educating children and construct their houses without murmuring about income deficiencies. In private hospital and clinic there are working so many diploma completed ,BSC completed and MSC completed nurses, pharmacist who have been paid very less salary by the management authority though they are working many years ,especially most of them have been working only for salary without job guarantee and security though there were rules and regulations. Social and economic status of women in health care services from sweeper to doctors are varied comparing to government hospitals in which doctors are paid high salary where as other women low cadres are paid low salary though they have been highly educated ,in private hospitals and clinic management is giving preferences to doctors with an aim to sustain them by not allowing to other hospitals where as low range women's from nurses to sweepers are paid low salary by knowing and understanding they may there and may not be there but they will work there for their survival purpose .There are more variations and disparities between hospitals to hospitals and employees to employees on account of education, position and management status.

Table-2 Status of women working in health care services in cuddalore District

S.No.	Names of Position	Salary	Job Security	Job satisfaction	Social and Economic Status	Remarks
1.	Nurses	4500 to 10000	No	No	Not good	Need improvements in salary and job security
2.	Office Staff	4500 to 8000	No	No	Not good	Need improvements in salary and job security
3.	Clerks	4500 to 5500	No	No	Not good	Need improvements in salary and job security
4.	Sweepers	3500 to 5000	No	No	Not good	Need improvements in salary and job security
5.	Receptionists	3500 to 6000	No	No	Not good	Need improvements in salary and job security
6.	Billing women	4500 to 7000	No	No	Not good	Need improvements in salary and job security
7.	Computer Operators	4500 to 7000	No	No	Not good	Need improvements in salary and job security
8.	Typewriter	4500 to 7000	No	No	Not good	Need improvements in salary and job security

All citizen know the factual and actual situation of the private hospital's salary details and job details they shall do their duty based on the income range of their hospitals and also spare more amount to management development without giving to workers, would be stressed and asked by the management authority to fasten their work and catch the patients or give next month salary to the workers. Than management authority workers in private hospitals have been foundations and income bringers to them by catching patients and propagating about their hospitals to the patients in their villages

.Until women get 45 age would be working without minor improvements because management is having them for run hospitals and exploit money from the patients (Collection executives),women people used to work in private management hospitals for their meagre salary and majorly they are trained and advised and duty imposed to collect money from the patients for the management developments. Most of women have felt and realised that their job and salary does not seem to be satisfactory due to management hospitals therefore needs government intervention to improve our life.

Table-2 Social and Economic status of women working in health care services in government hospitals in Cuddalore District

SNo.	Jobs Nature	Salary	Job Security	Satisfaction	Social and economical status	Remarks
1.	Nurses	6500 to 19000	100%	100%	Good	Needs to do work properly
2.	Office Staff	5500 to 19000	100%	100%	Good	Needs to do work properly
3.	Clerks	5500 to 19000	100%	100%	Good	Needs to do work properly
4.	Sweepers	5000 to 15000	100%	100%	Good	Needs to do work properly
5.	Druggist	5000 to 14000	100%	100%	Good	Needs to do work properly
6.	Dean	200000	100%	100%	Good	Needs to do work properly
7.	HOD	200000	100%	100%	Good	Needs to do work properly

In Public enterprises salary, job security, satisfactions and social status off the women employees are developed lot due to it falls in constitution and government parameter thereby their career are fostered and developed by the state governments without flaw. Comparing to private hospitals people and officers in public hospitals are not used to work carefully and seriously though they are being paid highly by the public sectors whereas private people are working lot and sincerely and regularly fearing to management authority and their job but they are being paid very less salary by the management authority .social and economic status of the women working in private hospitals are seeming to be pitiful and pathetic though they have enough skills and competency whereas women working in public concern are

paid huge and highly therefore their social and economic status are seeming to be more satisfactory.

Conclusion

In final draft and summary of this analyses people or women who are working in private hospitals are paid very less salary ,no job security and satisfaction thereby their social and economical developments are more weaker than public sector’s hospitals which needs to be strengthened because their family burdens could not be reduced by women at less alary therefore their life and social developments are being at fixed situation without an alternative ways and path ,in social settings their life and career styles are not respected and developed thereby their faeces are shrunken. Most of women in private clinic and hospitals have been

working without job security and enough salary until they attain 45 age ,have been forced by the management authority to sustain patients after their illness is over and recuperated from illness ,asked to make fake bill for claim more money from the patients family and relations ,if they do all these jobs their less salary job would be sustained until they want to work on voluntary basis. Based on this summary and suggestion minimum salary and job satisfaction must be provided on the basis of their work nature, qualification nature and humanitarian grounds.
